

GRAFTON

Product :

LLST-0085 Odorless

For Twofold to Fivefold Dilution

Deodorant for Perm and Coloring Solution Smells

Product Description

Purpose Deodorizing remaining and distinctive smells of Amines such as Ammonia, Mono-Ethanolamine, Para-Phenylenediamine and etc. containing in Perm and Coloring Solutions which are diffusing from treated hair after treatment.

Directions Dilute with water in twofold ~ fivefold before use.
Fivefold dilution: pH value is 8.0 or lower
Fourfold dilution: pH value is 9.0 or lower
Twofold - Threefold dilution: pH value is in 10.0 - 11.0 range
Rinse either perm or coloring solution with same amount of diluted LLST-0085 as above first and then, shampoo the treated hair.

Performance Evaluation

Diffusing Chemical Substance	Specimen (Apply on filter paper)	Measurement by detecting tube. <small>Insert specimen into chamber and seal.</small>	Reduction Rate
Ammonia	Apply perm solution (pH Value 8.5)	240ppm	0%
	After applying perm solution, apply LLST- 0085 (Fivefold diluted)	Undetected	100%

Diffusing Chemical Substance	Specimen (Apply on filter paper)	Measurement by detecting tube. <small>Insert specimen into chamber and seal.</small>	Reduction Rate
Ammonia	Apply perm solution (pH Value: 8.8)	480ppm	0%
	After applying perm solution, apply LLST- 0085 (Fourfold diluted)	Undetected	100%

* Applied same amount of perm solution and fivefold LLST-0085 solution.

* Change the dilution rate according to the deference of alkali level.

Technical data

Form:	Liquid
Color:	Colorless and Transparent
Odor:	Odorless
Main Comp.:	Zinc Compound、 Hydroxy Acid、 Purified Water * Above Components are all used for Food, Cosmetic and quasi-drug products.
Non-volatile Comp.:	< 10%
pH:	Slightly acid
